BEST Email Forwarding

If you don't want to set up a hosting account for a website but would still like to receive email at your domain (e.g. info@yourdomain.com) then email forwarding may be the solution you're looking for. Email sent to addresses at your domain would then automatically be redirected to an email account such as johnsmith@aol.com.

Email forwarding is a great way to present a consistent corporate ID to your customers and is available ABSOLUTELY FREE.

Email Forwarding is not a an email box with an allocation of disc space and a username and password like a POP3 Account. If you intend to buy Web Hosting for your domain name you do NOT need email forwarding, email functions are included free in the Web Hosting Account.

If you require fully-fledged email boxes (POP3 Accounts) with your domain name then you should arrange these with your hosting provider.

IMPORTANT: If you wish to use our email forwarding service, your domain name must be delegated to our primary and secondary DNS servers. These are ns1.planetdomain.com and ns2.planetdomain.com respectively.

If you are not currently a customer of ours, you will first need to transfer your domain to us before we can arrange Email forwarding.

To this, you need to:-

- Transfer your domain to us here <http://domains.manysquares.com/transfers.jsp>; and
- The go here to login and setup your free email forwarding http://domains.manysquares.com/newdnr/email_forward/wizard2.jsp.
